

Galaxy stones

You will need

- Small, smooth rounded stones or pebbles
- Wax crayons

Other options:

- * Glitter or metallic crayons
- * Glitter to sprinkle on warm wax before it sets

Method

- Put your stones on a baking sheet
- Heat in oven set on a medium heat for approx 10 minutes or until the stones are hot enough to melt the wax when applied.
- Remove the baking tray, using oven gloves, and place your baking sheet on a heat proof surface
- Being careful not to touch the stones, melt the wax crayons onto the stones
- White crayons are good for helping colours to mix in and blend
- Try using glitter or metallic crayons if you have them
- Glitter might stick when sprinkled on to the melted wax
- When wax has dried and your stones have cooled down, remove from the baking sheet and then where to display them

Display suggestions

- Give as a gift to a friend or family (find out what their favourite colours are and use these when creating your Galaxy)
- Display them around your home
- They can also be used outside to decorate your garden, in plant pots, on window sills etc
