Age UK is a charitable company limited by guarantee and registered in England (registered charity number 1128267 and registered company number 6825798). The registered address is Tavis House 1-6 Tavistock Square, London WC1H 9NA.

The National Institute for Health and Care Excellence (NICE) is in the process of updating its existing clinical guideline on 'dementia: supporting people with dementia and their carers in health and social care' (CG42). As part of this, stakeholders have been invited to comment on the draft scope of the forthcoming guideline, which is due to be published in March 2017. Dementia is one of the most important challenges facing our ageing society, where a growing number of older people live with the condition. Age UK welcomes the opportunity to comment on this draft scope, and help ensure the new guideline clarifies the pathway for those who receive a diagnosis of dementia and their families.

Key points and recommendations

Age UK's detailed comments can be seen in the NICE proforma below. Key points from our response include:

- Supporting the stronger emphasis within the draft scope on assessing and managing multiple long-term conditions (co-morbidities) in people with dementia;
- Ensuring that the new version of the NICE guideline clarifies the pathway following diagnosis by setting minimum requirements for high-quality post-diagnosis support.

Age UK's comments

Please note:		Please read the checklist for submitting comments at the end of this form. We cannot accept forms that are not filled in correctly or arrive after the deadline. Developing NICE guidance: how to get involved has a list of possible areas for comment on the draft scope.

1	General	General	Age UK welcomes the opportunity to comment on the draft scope of the forthcoming update of the NICE Clinical Guideline on dementia (CG42). Dementia is one of the most important challenges facing our ageing society, where a growing number of older people live with the condition. Updating the NICE guideline offers a welcome opportunity to reflect changes and developments in the sector, but also to clarify the pathway for those who receive a diagnosis of dementia and their families.
2	General	General	Age UK particularly supports the stronger emphasis within the draft scope on assessing and managing co-morbidities in people with dementia, as studies have shown that around 95% of people with dementia live with at least one other health condition (Barnett K et al, <i>The Lancet</i> , 2012). This is particularly important as evidence suggests that people with dementia do not have the same access to treatment and monitoring for conditions such as visual impairment and diabetes as those with similar comorbidities but without dementia (Bunn F et al, <i>BMC Medicine</i> , 2014). The high rate of comorbidity – with the average of 3-4 comorbidities accompanying dementia (Poblador-Plou B et al, <i>BMC Psychiatry</i> , 2014) – also emphasises the need to provide person-centred, integrated care services which are suited to catering for a wide range of individual needs within a local population, and we welcome the renewed focus on integrated care within the scope of the guideline.

While we understand that elements of what const diagnosis support may be scattered throughout d the guideline (e.g. advice on emotional support or functional features), we are concerned the draft's out on an opportunity to clarify the pathway follow dementia, and set a benchmark for what good po support should look like. At the moment, access t on what happens after a diagnosis and the support hrough the journey remains patchy throughout the appropriate support is too often lacking (All-Party Group on Dementia, Building on the National Der Change, progress and priorities, 2014). For exam survey by the Dementia Action Alliance found that with dementia felt they did not have enough inforr they need following diagnosis (Dementia Action Areport 2014/2015, 2014). Comprehensive advice and support after diagnos important in order to equip individuals and their fe tools, connections, information and plans they need dementia as well as possible, and prepare for the are ready to do so. Unlike Scotland, there are still requirements of post-diagnosis support in Englan understand that NHS England is currently looking (NHS England, Business Plan 2015/16, 2015) – a whether responsibility for support should sit with to care, or both. We also know that a number of Gliagnose dementia in people because they feel the done to support them' (Department of Health, Deuten antion report on dementia care and support in Tackling inadequate provision of post-diagnosis raising awareness among GPs of what services a locally therefore seems essential to encouraging and support for people with dementia. This is why Age UK believes that there should be minimum standard of good-quality post-diagnosis people with dementia and their carers. Specificall the new version of the NICE guideline covers a strequirements for high-quality support following dia helpful in clarifying and spreading good practice in building on recommendations from existing releve standards (QS1 and QS30).
